

PIPELINE CORRIDOR COMPREHENSIVE MANAGEMENT

Project Scope:

The Royal Commission for Jubail and Yanbu, as the pipeline corridor's landowner, is responsible for pipeline corridor asset safety, engineering, construction, inspection and maintenance, roads, and utilities. At the present time, the industries that use the pipe passage area are purely responsible for laying the pipes during construction, in addition to performing maintenance and inspection tasks with coordination and approval from the Royal Commission for Jubail and Yanbu. JABEEN will establish a new pipeline services company to take advantage of the concept of joint services through the centralization of inspection and maintenance of the corridor and pipelines, as well as any supporting functions required to achieve comprehensive risk management for the corridor and pipelines in Jubail and Yanbu

Added Value:

- High risk mitigation and operational and maintenance efficiency
- Create a viable business model for a new pipeline service provider.
- Improving the use of the assets of the Royal Commission for Jubail and Yanbu
- Reducing capital investment in pipe passage expansion.
- Take advantage of the integration of shared services and infrastructure.
- Increasing the appeal of Royal Commission cities
